**Panama City, Fla.**— Bay County received confirmation of one additional case of COVID-19, the novel coronavirus. The person ill with the virus is a 33-year-old male. This brings Bay County's total COVID-19 cases to 76, including 75 residents and one non-resident.

The Florida Department of Health in Bay County (DOH-Bay) is now conducting its contact investigation and working on identifying and notifying individuals who will need to self-monitor for symptoms for a 14-day period. Contact investigations are a critical way for staff epidemiologists to track and prevent the spread of disease.

Bay County's total COVID-19 cases is at 76, including 75 residents and one non-resident. While Bay County's testing is increasing, the percent of those testing positive for COVID-19 overall is 5%. Of the 1,696 tests processed, there are 1,618 negative results. There are three deaths in Bay County from COVID-19. The total hospitalizations count is at ten including nine residents and one non-resident.

The addresses of the 75 positive Bay County residents include; 48 in Panama City, 12 in Panama City Beach, one in Southport, six in Lynn Haven, one in Parker, three in Youngstown, one in Tyndall Air Force Base, and three in Callaway. The non-resident case is from Texas.

Age, gender, race, and ethnicity data is available on the dashboard. Zip code level case numbers are also available. The dashboard is updated daily. For more detail on Florida resident cases, please visit the live DOH Dashboard. More information on a case-by-case basis can also be found in the Daily Report. Both are located at [FloridaHealthCOVID19.gov](https://www.floridahealth.gov/covid-19). We encourage all Floridians to take the COVID-19 Community Action Survey by visiting [www.StrongerThanC19.com](https://www.StrongerThanC19.com)

**COVID-19 symptoms and treatment**

The symptoms of COVID-19 can mirror illnesses such as influenza. Patients with COVID-19 typically display symptoms such as fever (100.4°F or higher), cough, and/or shortness of breath within 2 to 14 days of exposure to the virus. Approximately 80% of those affected with COVID-19 report mild to moderate illness and experience a complete recovery. Some experience more severe illness. People who are more vulnerable to the illness include individuals who are over age 65 with underlying health conditions, immunocompromised, ill or have underlying chronic health conditions, such as heart disease or diabetes.

Many cases of COVID-19 can be managed at home by treating symptoms, and this is encouraged. However, if you develop worsening symptoms, such as shortness of breath, chest pain, or inability to drink fluids, contact 911 and advise them of your symptoms as you may need treatment at a hospital.

### **COVID-19 overview, symptoms, and general prevention**

COVID-19 is a new type of coronavirus; coronaviruses are a large family of viruses, some causing illness in people and others that circulate among animals. Other coronaviruses include the common cold and Severe Acute Respiratory Syndrome (SARS). COVID-19 is believed to have emerged from an animal source and is now capable of spreading from person-to-person. There is currently no vaccine to prevent COVID-19.
